PROJECTS

1. Custom Data Extractor:

An automated training data extractor for deep learning satellite image multi label classification, by using Python and OpenStreetMap Database.

2. Genetic Algorithm for Cascaded OTA:

Using Genetic Algorithm to predict parameters for Operational Transconductance Amplifiers “OTA’s” design.

EXPERIENCE

Internship as technical support at Town Hall of Chania, Crete.

- monitoring computer systems and networks
- responsible for hardware and software faults

Participation in “SenseLab” of Technical University of Crete as undergraduate student.

- analyzed and clarified new techniques in the field of ML
- collaborate with other students to work in school projects
